

HAN'S GS LASER CUTTING MACHINE ORDERS STEADY GROWTH HIGH-POWER LASER INTO THE MARKET DARLING

Since the first quarter, especially in March, our company's laser cutting machine orders were steady growth, especially high-power laptops into the market darling. GS-LFTP6015, GS-LFD3015 series of products in the metal processing share has always come out on top, To super-finishing process to create excellent quality metal parts: Whether it is precision cutting thermoformed pieces, or to create body and car tube with complex design and dimensions of the special-shaped parts. The steady growth of the automotive industry is one of the central factors driving the global laser cutting machine market.

Over the past few years, China and India and other Asian countries, a substantial increase in automobile production capacity. Industrial fiber lasers and disc lasers in the recent rapid development of traditional solid-state laser processing has also brought significant technological transformation. Today, the traditional cutting machine is being replaced by excellent beam quality and high degree of automation laser cutting machine. Lasers will become the mainstream of the global laser cutting machine market.

From the point of view of the order area, the demand for high-power lasers such as China, Korea, Japan and Thailand is growing significantly, based on the rapid expansion of its manufacturing sector. In addition, the demand for high-power lasers in aerospace, defense, automotive and medical applications in Europe and North America is growing.
